Pelczar Technology specializes in the design and implementation of electronic hardware that meets strict EMC under EN61000-6-2, EN61000-6-4, EN300220 and ATEX Equipment Directive. Our core competence is helping companies bring their products to the market faster through our engineering services that range from requirements specifications through product design and implementation to preparation for testing to industrial norms and supervision of the tests at an authorized testing facility.

The research and development activities of **Pelczar Technology** aim at bringing innovative products to the market. The products resulting from our research are backed by patent applications.

Our know-how is used in the most demanding conditions in 17 countries spread out across five continents.

Pelczar Technology is based in southern Poland in the vicinity of Krakow, from where it serves its portfolio of international clients.
